AJUSTE DISTRIBUCIÓN T-STUDENT

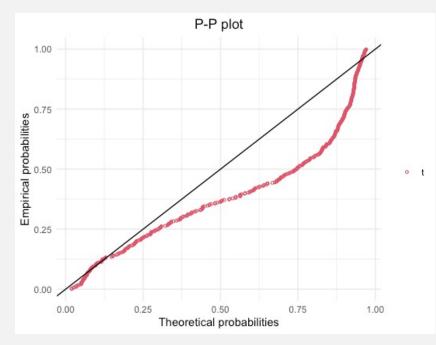

> summary(Ajuste_2)

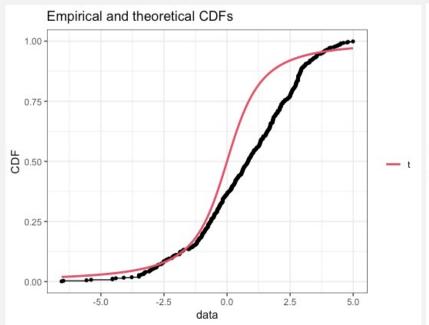

Fitting of the distribution 't' by maximum likelihood

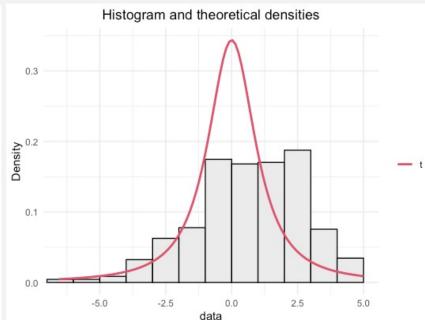

Parameters: En esta parte se estimaron parámetros de
estimate Std. Error tal forma que se le pudiese justar una
distribución t-student a los datos.

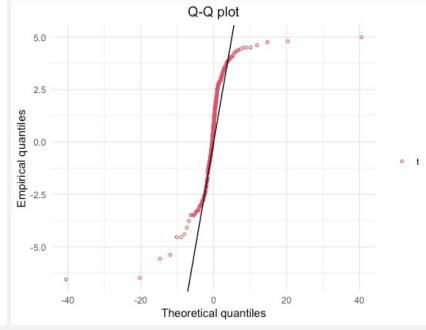

Loglikelihood: -1125.194 AIC: 2252.387 BIC: 2256.527

| Prueba | P-Value | D/An |
|--------|-----------|--------|
| K-S | 2.2e-16 | 0.2573 |
| AD | 1.293e-06 | 57.475 |

AJUSTE DISTRIBUCIÓN GUMBEL

> summary(Ajuste_3) Fitting of the distribution ' gumbel ' by maximum likelihood Parameters :

AIC: 2130.739

estimate Std. Error alpha -0.3823356 0.11199639 scale 2.2700036 0.07185254

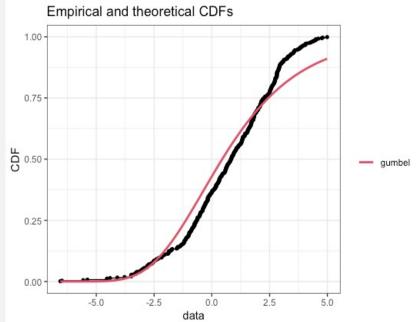

Loglikelihood: -1063.369 Correlation matrix:

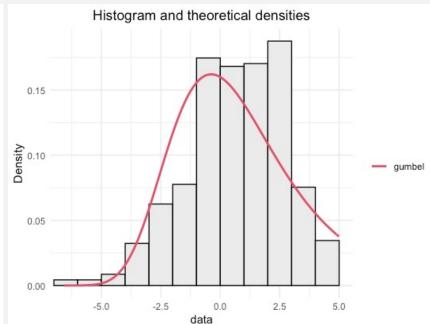

alpha scale

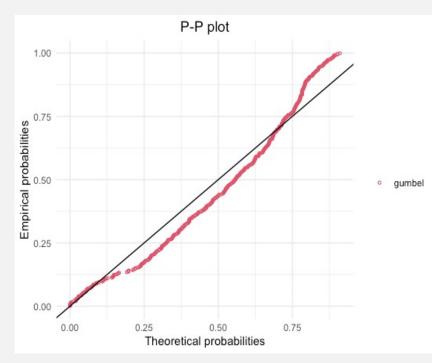

alpha 1.000000 0.338857 scale 0.338857 1.000000

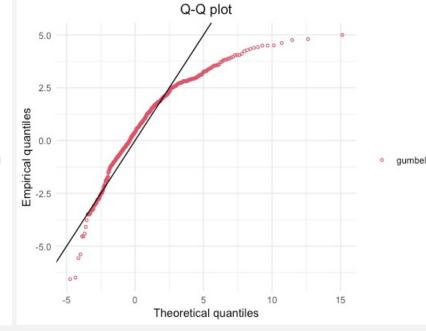

BIC: 2139.019 En esta parte se estimaron parámetros de tal forma que se le pudiese justar una distribución Gumbel a los datos.

| Prueba | P-Value | D/An |
|--------|-----------|---------|
| K-S | 7.57e-05 | 0.10475 |
| AD | 1.523e-06 | 11.358 |

AJUSTE DISTRIBUCIÓN LOGÍSTICA

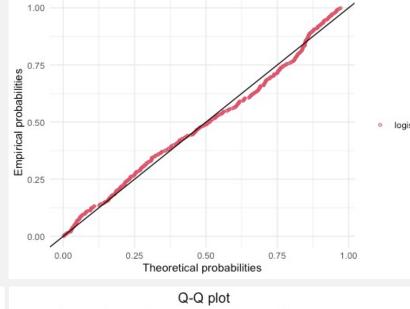

Loglikelihood: -999.6449 AIC: 2003.29 BIC: 2011.569

Correlation matrix:

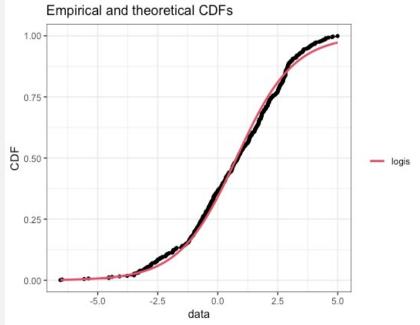

location scale location 1.00000000 -0.02936413

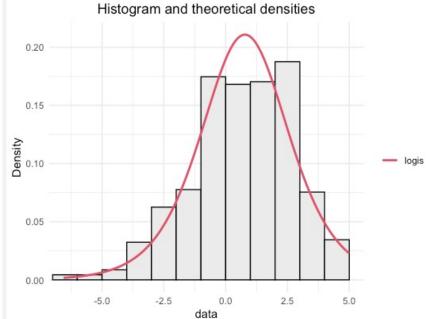

scale -0.02936413 1.00000000

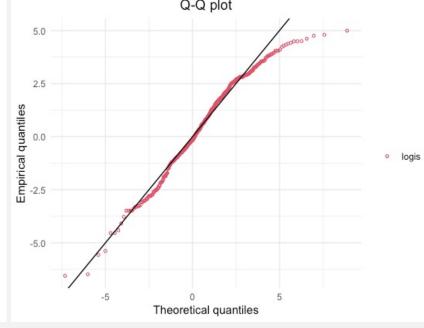

| Prueba | P-Value | D/An |
|--------|---------|----------|
| K-S | 0.2804 | 0.045983 |
| AD | 0.09037 | 2.013 |

P-P plot

AJUSTE DISTRIBUCIÓN BURR

> summary(Ajuste_5)

Parameters :

estimate shape1 162.55286571

En esta parte se estimaron parámetros de tal forma que se le pudiese justar una distribución Burr a los datos.

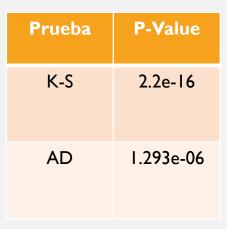

1.59151636 shape2

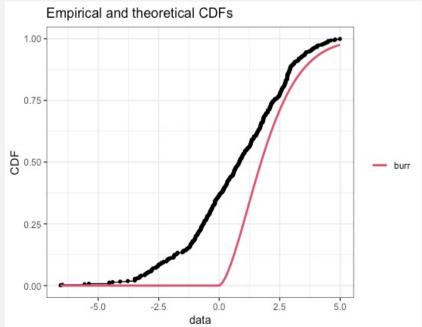

0.01872819 rate

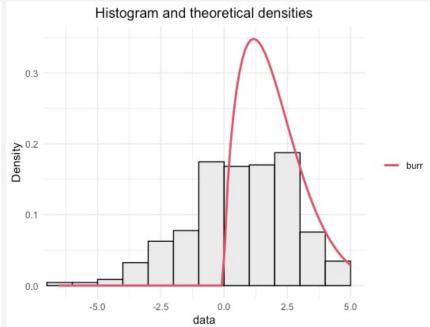

Loglikelihood: -Inf

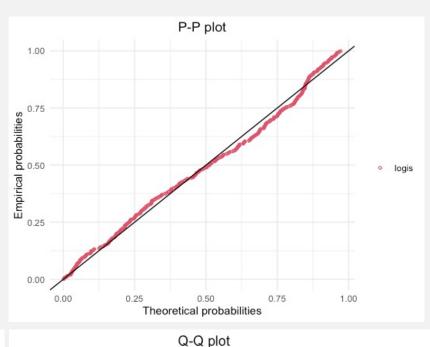

AIC: Inf

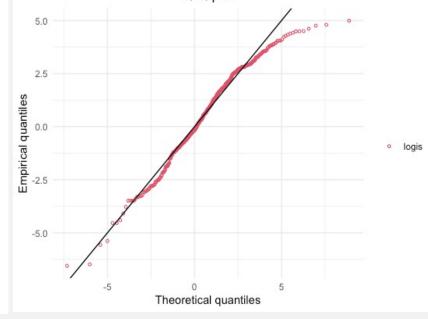

BIC: Inf

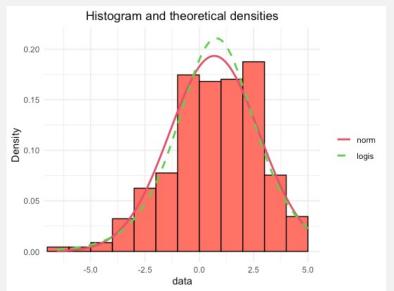

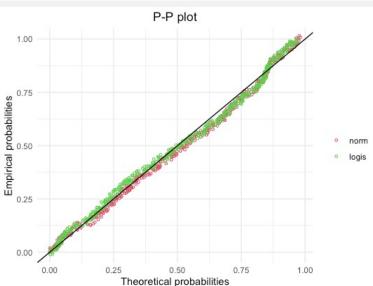

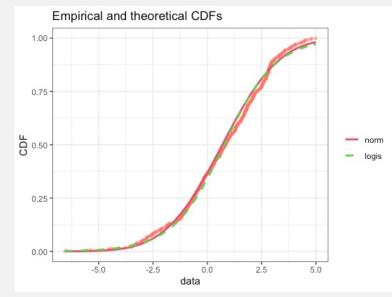

AJUSTE DE DISTRIBUCIÓN NORMAL Y LOGÍSTICA VS DISTRIBUCIÓN TEÓRICA

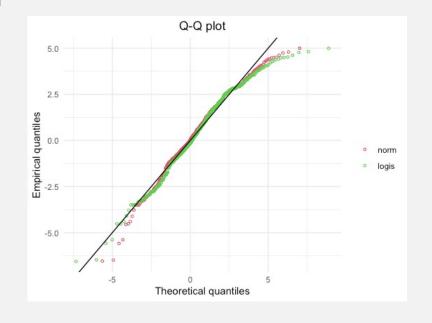

| Prueba | Normal | Logística |
|--------|--------|-----------|
| K-S | 0.1894 | 0.28040 |
| AD | 0.1154 | 0.09037 |

| Goodness on fit Criteria | Normal | Logística |
|-----------------------------|--------|-----------|
| AIC | 0.1894 | 0.28040 |
| BIC | 0.1154 | 0.09037 |

CONCLUSONES:

Al analizar los p-values de cada prueba de hipótesis concluimos que las distribuciones que más se ajustan son la normal y la logística, sin embargo al tomar los criterios de bondad de ajuste, vemos que la normal se ajusta mejor que la distribución logística.

Entonces concluimos que la distribución normal es la que más se ajusta con los datos.
